Power Transmission Gear Technology

Your flexible partner in maintenance and in special machinery

We use our technical expertise, our market and production experience and provide you with customized solutions.

Services for mechanical engineering

We are focusing our services on gearboxes, gearwheels and power train technology. Our core competence is the implementation of a drive solution in your machine environment and through our longtime production experience we are capable to plan a smooth project realization from engineering to gear assembly. On demand we supply total ready to install gearboxes and drive solutions.

Services for maintenance and repair

Adjusting the costs and benefits of maintenance activities is an essential issue for optimizing the economic operation of industrial production plants. We can help you to optimize the maintenance and repair costs of your production. Therefore we offer a useful range of services. Please see for yourself and choose the your suitable services together with us.

Our product and service portfolio at a glance:

- **Engineering and services in the transmission and gear technology**
- **Delivery of gear wheels, gears and drive systems**
- **Development of customized drive concepts**
- **Repairs and service for industrial gears**
